Restaurant Management System

Problem Statement:

The case study titled Restaurant Management System is restaurant management software for the purpose of monitoring and controlling the transactions in a restaurant. This case study on the restaurant management system gives us the complete information about the restaurant and the daily transaction done in a restaurant. A Restaurant Management System is a software built to handle all restaurant activities in an easy and safe manner. This System will give the Restaurant management power and flexibility to manage the entire system from a single portal. The system allows the manager to keep track of available tables in the system as well as the reservation of tables and bill generation. We need to maintain the record of news and retrieve the details of menu available in the restaurant which mainly focuses on basic operations in a restaurant like adding new chefs, new menu, and up new information, searching menu and chefs and facility to borrow and return feedback. It features a familiar and we thought out, attractive user interface, good ideas of which are borrowed by the customers. Online restaurant system has admin, chefs, customers, there are access specific fields such as admin contract with vendor, add chefs, menu details and staff details. On the others hand, chefs access restaurant kitchen and make a tasty dish. Customers can by dishes and other information.
